MBS Business Solutions Corporation goes global

As MBS Business Solutions Corporation celebrates its second year, it became a global company with the establishment of its subsidiary in Singapore: MBS Business Solutions Pte. Ltd.

Singapore is becoming increasingly important as a "strategic center" for financial and other institutions aiming to develop their global businesses in the rapidly growing Asian markets. Singapore provides the ideal environment not only for the long-time-established bases of U.S. and European institutions in the region, but also for the emerging Chinese and Indian companies, and Japanese businesses expanding overseas. Opening its subsidiary in Singapore represents MBS' strategic response to the growing need for differentiated IT services in Asia. MBS is introducing "Made in Japan" service—superior technology, accuracy, and superlative quality—to other Asian markets. In this way MBS can offer the same quality support to its Japanese clients expanding their business in the region, and a coordinated and harmonized service to support global and financial institutions operating in Japan. In addition, MBS is making its business even more resilient, assuring continued support to our customers' mission-critical operations even in the event of major disasters.

MBS can provide the required business solutions encompassing IT, telecommunications, infrastructure, and knowledgeable procurement services to domestic and international companies. In addition, MBS can offer a comprehensive and coordinated support to implement and maintain BCP (Business Continuity Plan) improving the resilience of business operations and efficient risk management to its customers in the region.

"I take this opportunity to express my gratitude to customers and partners that made this possible through their valuable and continued patronage. We will continue to deliver the most adequate solutions to our customers in Japan, and extend our commitment to excellence in IT and business solutions throughout Asia."—Pedro Muniz, CEO.
